EXPERIMENT – 14

CREATE A VIRTUAL HARD DISK AND ALLOCATE STORAGE USING VMWARE WORKSTATION

Aim

To create a virtual hard disk and allocate storage to a virtual machine using VMware Workstation.

Requirements

Windows host computer, VMware Workstation, and an existing or newly created virtual machine.

Procedure

1. Open VMware Workstation and select the required virtual machine.

2. Power off the virtual machine before changing its hardware settings.

3. Click **Edit virtual machine settings** and select **Add** on the Hardware tab.

4. Choose **Hard Disk** and click **Next**.

5. Select the recommended virtual disk type (for example, SCSI) and continue.

6. Select **Create a new virtual disk**, then click **Next**.

7. Enter the required disk capacity, choose how the disk file should be stored, and continue.

8. Choose a file name and location, then click **Finish**.

9. Verify that the new hard disk appears in the VM hardware list. If required, initialise and format it inside the guest operating system.

Implementation Input

VMware Workstation with the Add Hardware Wizard open and the option to create a new virtual disk selected.

OUTPUT

Actual VMware Workstation screenshot provided for Experiment 14.

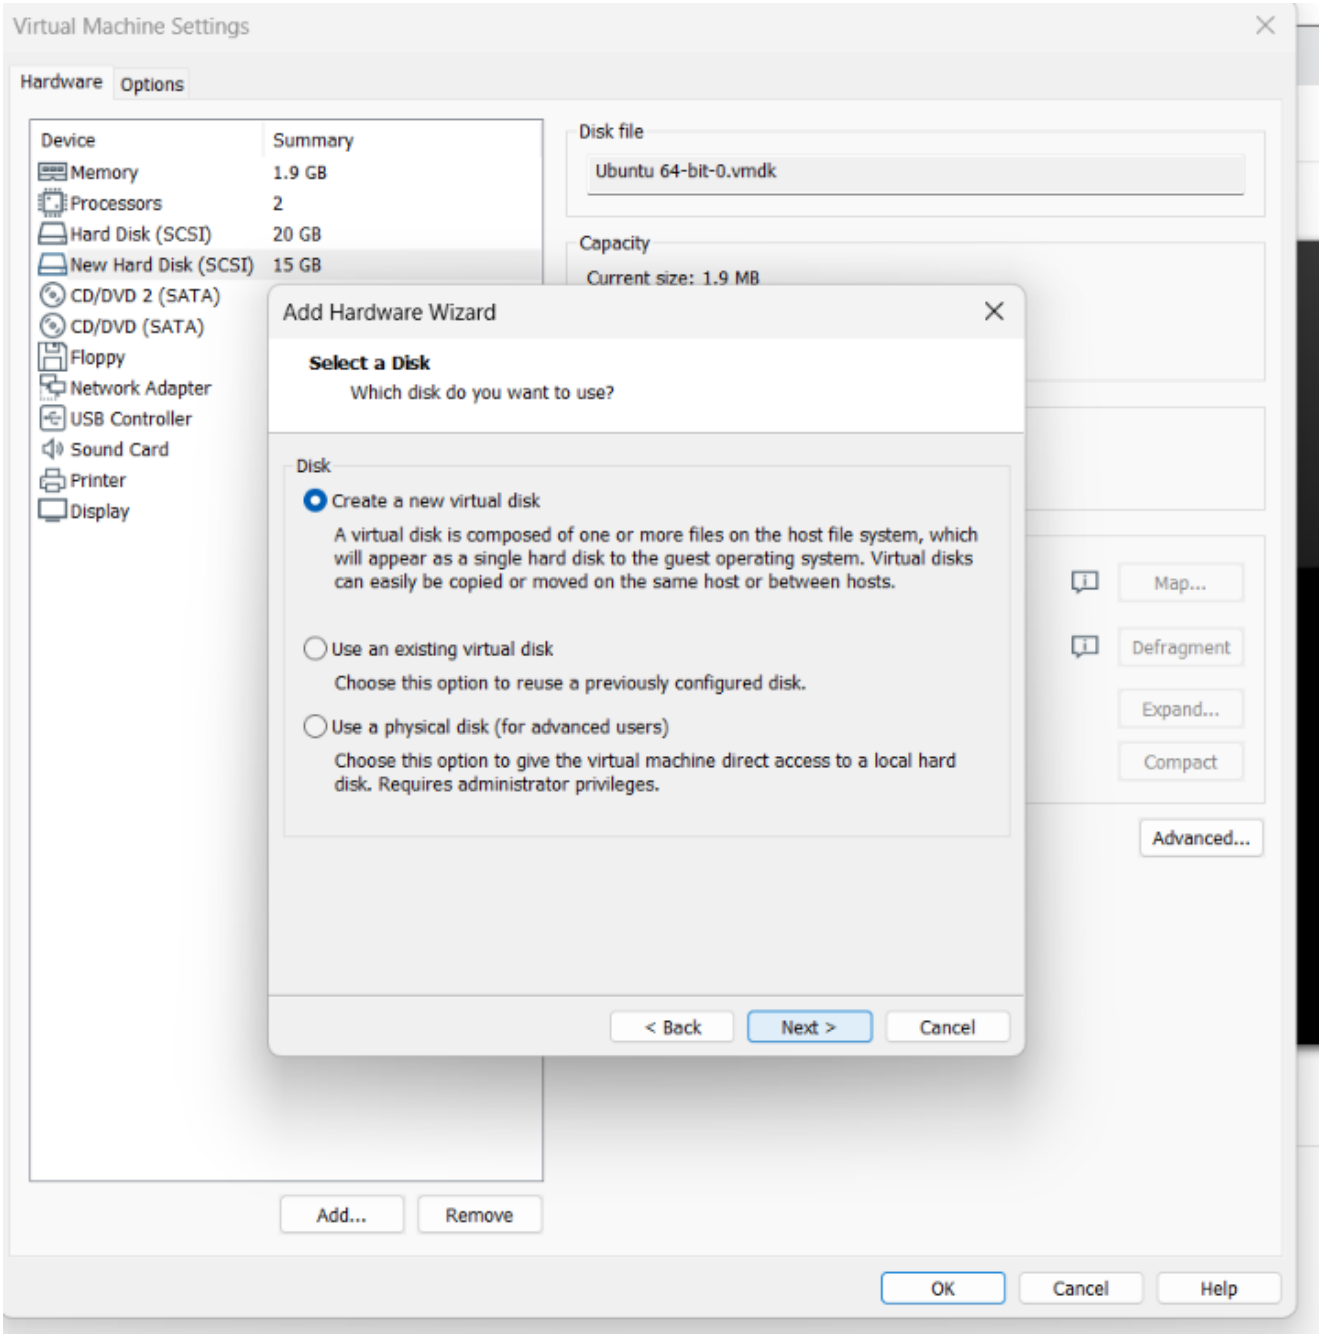

Figure 1: Add Hardware Wizard with “Create a new virtual disk” selected. The VM settings behind the wizard show a “New Hard Disk (SCSI)” entry with 15 GB listed.

Result

The virtual hard disk creation process was initiated in VMware Workstation. The supplied screenshot shows the new hard disk entry listed as 15 GB and the wizard ready to continue. To document completion fully, continue through the wizard and click Finish, then capture the final hardware settings.
