Experiment - 17

CHANGE HARDWARE COMPATIBILITY OF A VIRTUAL MACHINE

Aim

To change the hardware compatibility level of an existing or cloned virtual machine in VMware Workstation and verify that it runs.

Requirements

Windows host computer, VMware Workstation, internet connection, and a suitable guest operating system ISO file where required.

Procedure

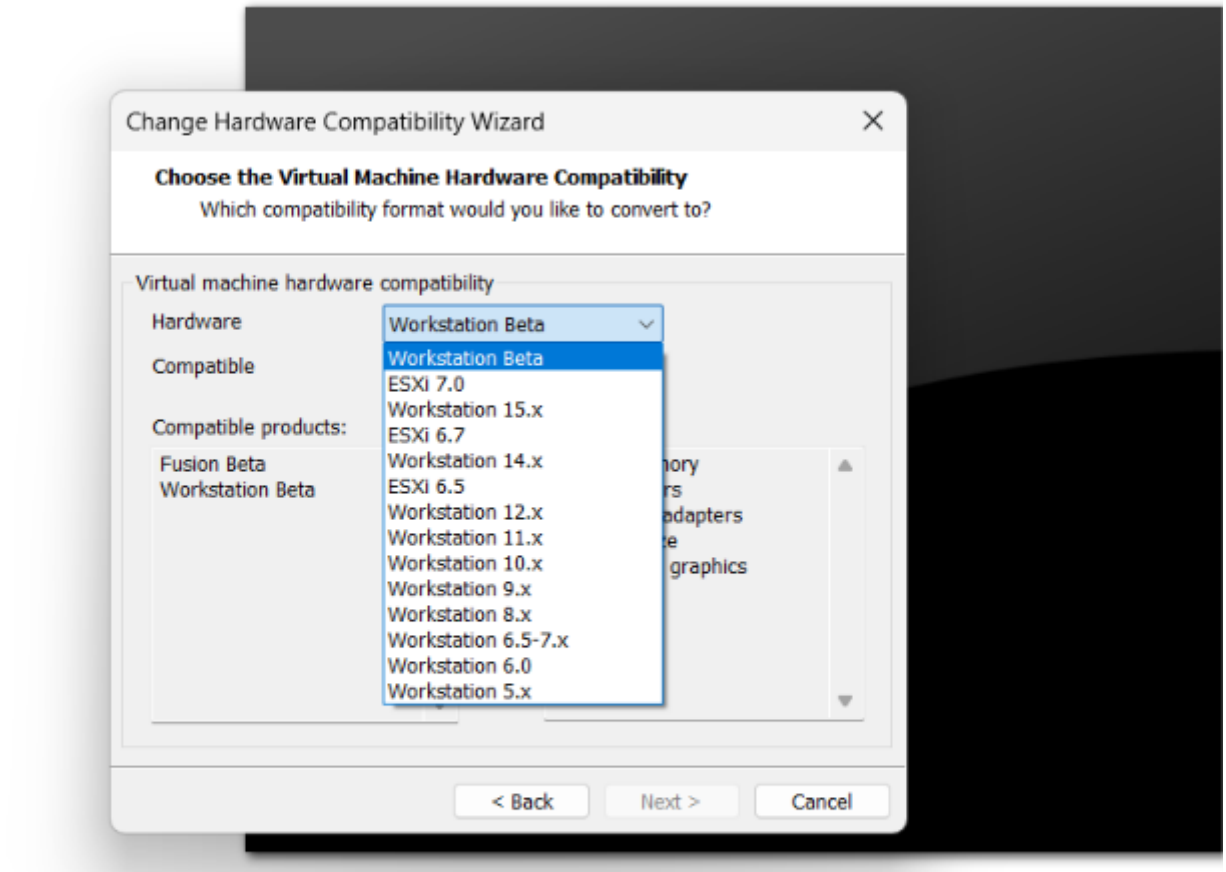

1. Open VMware Workstation and select a virtual machine that is powered off.
2. Create a backup or clone of the VM before changing compatibility settings.
3. Open the **VM** menu and choose **Manage → Change Hardware Compatibility**, if available in the installed version.
4. Read the wizard information and click **Next**.
5. Choose a hardware compatibility version supported by the installed VMware Workstation version and theintended destination host.
6. Review the compatibility change and complete the wizard.
7. Wait for the conversion to finish. Do not interrupt the process.
8. Open the VM settings and verify the new compatibility level if the interface displays it.
9. Power on the VM and check that the guest operating system starts correctly.
10. Record the selected compatibility level and the successful boot result.

Implementation Input:

A powered-off VMware virtual machine. A backup/clone is recommended before changing compatibility.

Reference input/configuration image (illustrative mockup):

Output:

off
1
share\OneDrive\Documents\Virtual Machines\Clone of Ubuntu 64-bit (2)\Clone of Ubuntu 64-bit (2).vmx
share\OneDrive\Documents\Virtual Machines\Ubuntu 64-bit\Ubuntu 64-bit.vmx
on Beta virtual machine

Result

Thus, the virtual machine hardware compatibility was changed and the VM was tested for successful operation.
